

April 6, 2020

PRESS RELEASE:

COVID-19 UPDATE – LINCOLN COUNTY, NC

Lincolnton, NC –

The following counts are based on data reported to the Lincoln County Health Department as of today:

| Lincoln County Specific Data - COVID-19 | | | | |
|---|-------------------------|----------------------------|----------------|------|
| Total Tested | Positive - Active Cases | Positive - Recovered Cases | Negative Cases | PUIs |
| 339 | 4 | 5 | 324 | 6 |

- A positive active case is a person who tested positive in a commercial, state, or CDC lab and remains in isolation until cleared.
- A positive recovered case is a person who tested positive in a commercial, state, or CDC lab but has now met the state criteria for clearance.
- A negative case is a person that is no longer considered a PUI because they tested negative in a commercial or state lab.
- A PUI is a person who was tested based on COVID-19 testing criteria and is self-isolating until test results are received. During the period of self-isolation, the Lincoln County Health Department provides daily contact management to all PUIs to monitor symptoms or contacts.

The next Lincoln County COVID-19 data update will be released on Wednesday, April 8, 2020.

Lincoln County residents are urged to exercise judgment and take the following precautions as appropriate:

STAY HOME AND CALL YOUR DOCTOR, IF NEEDED

Most people who get COVID-19 will recover without needing medical care. The Centers for Disease Control and Prevention (CDC) recommends that you stay home if you have mild symptoms – such as fever and cough without shortness of breath or difficulty breathing. You can call your doctor to see if you need medical care.

MOST PEOPLE DO NOT NEED A TEST.

When you leave your home to get tested, you could expose yourself to COVID-19 if you do not already have it. If you do have COVID-19, you can give it to someone else, including people who are high risk.

ISOLATE YOURSELF

If you are sick with COVID-19 or believe you might have it, you should stay home and separate yourself from other people in the home as much as possible.

- You can stop isolating yourself and go back to your normal activities when you answer YES to ALL THREE questions:
 1. Has it been at least 3 days (72 hours) since resolution of fever without the use of fever-reducing medications?
 2. Has it been at least 3 days (72 hours) since you have had an improvement in respiratory symptoms (e.g. cough, shortness of breath)?
 3. Has it been at least 7 days since symptoms first appeared?

Practice good hygiene and take everyday preventive actions to reduce exposure:

- Wash hands frequently with soap and water for at least 20 seconds at a time.
- Avoid touching your eyes, nose and mouth with unwashed hands.
- Avoid close contact with people who are ill.
- Cover your mouth and nose with a tissue when you cough or sneeze.
- Do not reuse tissue after coughing, sneezing or blowing your nose.
- Clean and disinfect surfaces that are frequently touched.
